PROGRAM INDEX TO VOLUME 20

Atomic Physics

Issue	*Page*	*Cat.no.*	
2	213	AAJD	RPA TWO ELECTRON EIGENFUNCTION (Fortran). A program to calculate the eigenfunctions of the random phase approximation for two electron systems. M.J. Jamieson and I.H.K. Aldeen.
2	221	AAHK	CPOLAR (Fortran). Energy eigenvalues and bound-bound transitions of hydrogen atoms in a magnetic field using cylindrical basis functions. S.M. Kara.
3	462	ACXY	000A CORRECTION 22/08/80 (Fortran). Calculation of wave-functions and collision matrix elements for one-electron diatomic molecules. A. Salin.

General Purpose

2	191	AAAM	CONTRACTION-JT-RECOUPLING (Fortran). A program to evaluate closed diagrams algebraically for angular momentum coupled product operators. B.D. Chang and S.S.M. Wong. Subroutine required by this program (for data) is ACZI 18(1979)35.
2	291	ABVD	FHT (Fortran). A method and a program for the numerical evaluation of the Hilbert transform of a real function. O.E. Taurian.
2	309	AANA	EXPFIT1 (Fortran). The method of Raptis and Allison with automatic error control. J. Mohamed.
3	421	ABVI	HYMBLO (Fortran). HYMNIABLOCK: eigenvalue solver for blocked matrices. R. Gruber.
3	441	ABVJ	RIEMANN ZETA FUNCTION (Fortran). A program for computing the Riemann Zeta function for complex argument. A. Banuelos and R.A. Depine.
3	447	AANB	COUL (Fortran). Coulomb functions (negative energies). K.L. Bell and N.S. Scott.

Laser Physics

3	373	ABVF	COLASE (Fortran). COLASE: a CO-N2-He laser kinetics code. S.A. Roberts.
3	413	ACWD	0001 INJLOK (Fortran). INJLOK: a CO2 laser injection locking code. A.R. Davies, K. Smith and R.M. Thomson.

Molecular Physics

2	267	ACZR	ONE CENTRE STATIC POTENTIAL (Fortran). Third version of a program for calculating the static interaction potential between an electron and a diatomic molecule. G. Raseev. See other versions of this program ACQW 2(1971)261, ACWO 11(1976)237.
2	275	ACZS	ELECTRON MOLECULE SCATTERING (Fortran). Electron scattering by closed or open shell diatomic molecules. G. Raseev. Subroutine required by this program (for data) is ACZR 20(1980)267. See other version of this program ACQO 1(1970)445.
3	462	ACXY	000A CORRECTION 22/08/80 (Fortran). Calculation of wave-functions and collision matrix elements for one-electron diatomic molecules. A. Salin.

Nuclear Physics

3 337 ABPJ VIRT SPEC (Fortran). Calculation of the virtual photon spectrum in distorted wave analysis. L.E. Wright and C.W. Soto Vargas.

Plasma Physics

3 353 ABVK MFP (Fortran). MFP: a code for calculating equation of state and optical data for noble gases. R.R. Peterson and G.A. Moses.

3 421 ABVI HYMBLO (Fortran). HYMNIABLOCK: eigenvalue solver for blocked matrices. R. Gruber.

3 429 ABVE PLASMA (Fortran). A program to solve rotating plasma problems. M. Bakker and M.S. van den Berg.

Quantum Chemistry

2 267 ACZR ONE CENTRE STATIC POTENTIAL (Fortran). Third version of a program for calculating the static interaction potential between an electron and a diatomic molecule. G. Raseev. See other versions of this program ACQW 2(1971)261, ACWO 11(1976)237.

2 275 ACZS ELECTRON MOLECULE SCATTERING (Fortran). Electron scattering by closed or open shell diatomic molecules. G. Raseev. Subroutine required by this program (for data) is ACZR 20(1980)267. See other version of this program ACQO 1(1970)445.

Radiative Transfer

3 353 ABVK MFP (Fortran). MFP: a code for calculating equation of state and optical data for noble gases. R.R. Peterson and G.A. Moses.

Solid State Physics

2 237 ABVB CAVLEED (Fortran). Calculation of LEED diffracted intensities. D.J. Titterington and C.G. Kinniburgh.

3 349 AAPC GRINT (Fortran). Gilat-Raubenheimer method for k-space integration. A. Simunek

3 459 ACIC 000ACORRECTION 11/10/79 (Fortran). Monte Carlo calculation of multiple scattering effects in thermal neutron scattering experiments. J.R.D. Copley.

3 459 ACIC B00ACORRECTION TO 0002 11/10/79 (Fortran). Monte Carlo calculation of multiple scattering effects in thermal neutron scattering experiments: modification to horizontal cylinder geometry. J.R.D. Copley.
